Teacher Wu Kuan | Graph a Line — Intercept First, Then Slope

English lecture notes · YouTube Short -WocCP5C-hU

1. The trap question

How do you graph y = mx + b quickly?

2. The method

- Step 1: plot (0, b).
- Step 2: from there, move by the slope (run right, rise up/down).
- Step 3: draw the line through the two points.

3. Parent check method

Watch your child graph y = 2x + 1 and say the three steps out loud.

Practice

1. What is the y-intercept of y = 3x − 2?
2. For y = (2/3)x + 1, start at the intercept and use the slope. What is the second point?
3. Name two points on y = −2x + 4.
4. Where does y = 2x − 6 cross the x-axis?
5. Find the line through (0, 1) and (2, 5).

Answers

1. (0, −2)
2. (3, 3)
3. e.g. (0, 4) and (1, 2)
4. (3, 0)
5. y = 2x + 1
