Teacher Wu Kuan | See It at a Glance — sin(θ + 90°) Without Memorizing

English lecture notes · YouTube Short 22IhXEI8Ibw

1. The trap question

sin(θ + 90°) = ?

2. The method

• Rotate the unit-circle point by 90°: the horizontal leg becomes the height.
• sin(θ + 90°) = cos θ; cos(θ + 90°) = −sin θ.

3. Parent check method

Ask your child to sketch the rotation instead of reciting the formula.

Practice

1. sin(60° + 90°) = ?
2. sin(45° + 90°) = ?
3. cos θ = 0.6. Find sin(θ + 90°).
4. sin(0° + 90°) = ?
5. Use cos(30° + 90°) = −sin 30° to find cos 120°.

Answers

1. 1/2
2. √2/2
3. 0.6
4. 1
5. −1/2
